EDUCATION

B.S. Computer Science

12/2025

University of California Merced

- Graduated: December 2025
- Dean's List: Fall 2023

SKILLS

Languages

Python, C++, SQL

Frontend

React, JavaScript, HTML, CSS

Databases

SQLite, Supabase

Backend

Flask, FastAPI, REST APIs, Authentication

ML/AI

PyTorch, TensorFlow, YOLOv11, Computer Vision, Vector Embeddings, Semantic Search, LLM Applications

Tools

Git, Docker, Vercel

PROJECTS

Spot It Symbol Detection (YOLOv11)

- Developed and fine-tuned a YOLOv11 model to detect matching symbols across Spot It cards, achieving >98% accuracy through dataset annotation and augmentation.

Personal CRM

- Built a full-stack CRM application using React, Python, and SQLite with relational database design and full CRUD functionality.

LLM Coding Assistant

- Developed a web-based LLM coding assistant with API integration, database persistence, and secure user authentication using hashed passwords.

PROFESSIONAL EXPERIENCE

Data Annotator

12/2025 – Present

Handshake (Contract)

- Annotated and validated machine learning datasets while maintaining high labeling accuracy and adherence to QA guidelines across hundreds of annotations.

AI Engineering Apprentice

Present

Flatiron School

Remote, US

- Developing AI-powered full-stack applications using FastAPI, semantic search, vector embeddings, and workflow automation for resume + job matching.
- Built scalable backend APIs and data pipelines to process and transform **5,000+ job postings**, improving semantic retrieval and recommendation accuracy.
- Built application features supporting AI-generated study materials, including document formatting, PDF generation, and backend processing workflows.

Capstone Experience

01/2025 – 05/2025

- Built and deployed a YOLOv11 computer vision model to detect cheese defects on a dataset of nearly 10,000 images.
- Achieved >70% detection accuracy, reducing manual inspection requirements.
- Developed a React and Flask web application for real-time inference and result visualization.
